

Guide to create NFT from RDF data

Steps:

1. call **insert_rdf** api of bsearch server to insert rdf data.

insert_rdf api returns NFT token URI.

2. call **awardItem** of ACCZIOM NFT contract.

The address of ACCZIOM NFT contract can be obtained by calling **accziom_token** api of token server.
awardItem returns NFT id of newly created NFT.

3. call **registerNFT** api of token server.

if NFT owner sell a person his NFT, **registerNFT** api should be called. i.e. whenever transfer of NFT is done, **registerNFT** api should be followed to call.
