

Facts

- Tokens enable the management & financing of open services
- Tokens align incentives among network participants
- The open network movement is here. It changes everything, especially business and wealth management.

[Crypto Tokens: A Breakthrough in Open Network Design](#)

Watt Cryptotoken's for Network of Accounting Professionals & their Clients

Lower the TCO of your Trade & Investment Network

Network Participants - Your clients and your peers

Watt Tokens are designed to help you optimise the financial performance of your Network.

Energy-based tokens built on the principals expressed by Buckminster Fuller – “*costing will be expressed in kilowatt-hours, watt-hours and watt-seconds of work. Kilowatt-hours will become the prime criteria of costing the production of the complex of metabolic involvements per each function or item.*”

In biology, complex of metabolic involvements are analogous to complex transactional functions of goods & services in the business domain.

The Watt token is designed to intelligently optimise the network of business participants –

- Faster payments for services, better cash throughput (faster payments may be rewarded by gas). Accounting principle = Throughput-based Accounting.
- Rewards for collaborative activities
- Rewards for expansion of the trading network
- Cost-effective transforms for brother/sister crypto's including Chronobank.io for staff payment and sonom.io for fog-based supercomputing resources
- Tokenised software resource purchasing
- Transfer with ease between a multitude of Cryptocurrencies or Government Fiat
- Build your trustworthiness in the network
- Trade amongst yourselves
